

Brussels, **XXX**
SANCO 12195/2013
[...] (2013) **XXX** draft

COMMISSION REGULATION (EU) No .../..

of **XXX**

amending Annex II to Regulation (EC) No 1333/2008 of the European Parliament and of the Council and the Annex to Regulation (EU) No 231/2012 as regards Magnesium dihydrogen diphosphate for use as raising agent and acidity regulator

COMMISSION REGULATION (EU) No .../..

of **XXX**

amending Annex II to Regulation (EC) No 1333/2008 of the European Parliament and of the Council and the Annex to Regulation (EU) No 231/2012 as regards Magnesium dihydrogen diphosphate for use as raising agent and acidity regulator

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1333/2008 of the European Parliament and of the Council of 16 December 2008 on food additives¹, and in particular Article 10(3), Article 14 and Article 30(5) thereof,

Having regard to Regulation (EC) No 1331/2008 of the European Parliament and of the Council of 16 December 2008 establishing a common authorisation procedure for food additives, food enzymes and food flavourings², and in particular Article 7(5) thereof,

Whereas:

- (1) Annex II to Regulation (EC) No 1333/2008 lays down a Union list of food additives approved for use in foods and their conditions of use.
- (2) Commission Regulation (EU) No 231/2012 of 9 March 2012³ lays down specifications for food additives listed in Annexes II and III to Regulation (EC) No 1333/2008.
- (3) The Union list and the specifications may be updated in accordance with the common procedure referred to in Article 3(1) of Regulation (EC) No 1331/2008 either on the initiative of the Commission or following an application
- (4) An application for authorisation of the use of Magnesium dihydrogen diphosphate as a raising agent and acidity regulator in certain food categories was submitted on 7 April 2011 and has been made available to the Member States.
- (5) Phosphoric acid - phosphates - di - tri- and polyphosphates (E 338 -452) are authorised for use in fine bakery ware as raising agents. Diphosphates (E 450) can be used as an alternative to Sodium aluminium phosphate (E541) and thus to reduce the aluminium content of processed foods. The diphosphates that can be used are specified in Regulation (EU) No 231/2012. The currently specified diphosphates have an astringent aftertaste, the so-called “pyro-taste”, and may contribute to the total sodium content of food.
- (6) There is a technological need to establish specifications, in the Annex to Regulation (EU) No 231/2013, for Magnesium dihydrogen diphosphate as this could be used as an alternative to the other diphosphates in order to reduce the "pyro-taste" and to avoid increasing the sodium level of a food. Therefore its specific use should be authorized in the categories 6.2.1: Flours, only self-raising flour; 6.5: Noodles; 6.6: Batters; 7.1:

¹ OJ L 354, 31.12.2008, p. 16.

² OJ L 354, 31.12.2008, p. 1.

³ OJ L 83, 22.3.2012, p. 1.

Bread and rolls and 7.2: Fine bakery wares. The number E 450 (ix) should be assigned to Magnesium dihydrogen diphosphate.

- (7) Similar substances, with equal or higher magnesium content compared to Magnesium dihydrogen diphosphate, the mono- and dibasic magnesium salts of orthophosphoric acid (E343i; E343ii) are already authorised for use in the same food categories where authorisation is requested for Magnesium dihydrogen diphosphate. The inclusion of Magnesium dihydrogen diphosphate as an alternative diphosphate in the annex of Regulation (EU) No 231/2012 and its subsequent use in foodstuffs will therefore not result in an increase of phosphorous nor magnesium intake. The establishment of the specification and the specific authorisation of the use of Magnesium dihydrogen diphosphate (E 450 (ix)) as a raising agent and acidity regulator is therefore not considered of safety concern.
- (8) Pursuant to Article 3(2) of Regulation (EC) No 1331/2008, the Commission is to seek the opinion of the European Food Safety Authority in order to update the Union list of food additives set out in Annex II to Regulation (EC) No 1333/2008, except where the update in question is not liable to have an effect on human health. Since the inclusion of Magnesium dihydrogen diphosphate in the annex of EC regulation 231/2012 and the authorisation of the use of Magnesium dihydrogen diphosphate (E 450 (ix)) as a raising agent is not considered of safety concern it is not necessary to seek the opinion of the European Food Safety Authority.
- (9) Regulation (EC) No 1333/2008 and Regulation (EU) No 231/2012 should therefore be amended accordingly.
- (10) The measures provided for in this Regulation are in accordance with the opinion of the [...] Committee,

HAS ADOPTED THIS REGULATION:

Article 1

Annex II to Regulation (EC) No 1333/2008 is amended in accordance with Annex I to this Regulation.

Article 2

The Annex to Regulation (EU) No 231/2012 is amended in accordance with Annex II to this Regulation.

Article 3

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels,

For the Commission
The President

José Manuel BARROSO

ANNEX I

Part E of Annex II to Regulation (EC) No 1333/2008 is amended as follows:

"

- (1) In category 06.2.1 "Flours", the following entry is inserted after the entry for food additives E 338 - 452:

"

	E 450 (ix)	Magnesium dihydrogen diphosphate	15000	(4)(81)	Only self raising flour
	(81) the total amount of phosphates shall not exceed the maximum level for E 338 - 452				

"

- (2) In category 06.5 "Noodles", the following entry is inserted after the entry for food additives E 338 - 452:

"

	E 450 (ix)	Magnesium dihydrogen diphosphate	2000	(4)(81)	
	(81) the total amount of phosphates shall not exceed the maximum level for E 338 - 452				

"

- (3) In category 06.6 "Batters", the following entry is inserted after the entry for food additives E 338 - 452:

"

	E 450 (ix)	Magnesium dihydrogen diphosphate	12000	(4)(81)	
	(81) the total amount of phosphates shall not exceed the maximum level for E 338 - 452				

"

(4) In category 07.1 "Bread and rolls", the following entry is inserted after the entry for food additives E 338 - 452:

"

	E 450 (ix)	Magnesium dihydrogen diphosphate	15000	(4)(81)	Only pizza dough (frozen or chilled) and "tortilla"
	(81) the total amount of phosphates shall not exceed the maximum level for E 338 - 452				

"

(5) In category 07.2 "Fine bakery ware", the following entry is inserted after the entry for food additives E 338 - 452:

"

	E 450 (ix)	Magnesium dihydrogen diphosphate	15000	(4)(81)	
	(81) the total amount of phosphates shall not exceed the maximum level for E 338 - 452				

"

ANNEX II

In the Annex to Regulation (EU) No 231/2012, the following entry is inserted after the specifications for food additive E 450 (vii):

E 450(ix) MAGNESIUM DIHYDROGEN DIPHOSPHATE	
Synonyms	Acid magnesium pyrophosphate, monomagnesium dihydrogen pyrophosphate; magnesium diphosphate, magnesium pyrophosphate
Definition	Magnesium dihydrogen diphosphate is the acidic magnesium salt of diphosphoric acid. It is manufactured by adding an aqueous dispersion of magnesium hydroxide slowly to phosphoric acid, until a molar ratio about 1:2 between Mg and P is reached. The temperature is held under 60°C during the reaction. About 0.1% hydrogen peroxide is added to the reaction mixture and the slurry is then heated and milled.
EINECS	244-016-8
Chemical name	Mono magnesium dihydrogen diphosphate
Chemical formula	MgH ₂ P ₂ O ₇
Molecular Weight	200.25
Assay	Content not less than XX % of magnesium dihydrogen diphosphate P ₂ O ₅ content not less than 68.0% and not more than 70.5% expressed as P ₂ O ₅ MgO content not less than 18.0% and not more than 20.5% expressed as MgO
Description	White crystals or powder
Identification	
Solubility	Slightly soluble in water, practically insoluble in ethanol
Particle size:	The average particle size will deviate between 10 and 50µm
Purity	
Loss on ignition	Not more than 12% (800 °C, 0,5 hours)
Fluoride	Not more than 20 mg/kg (expressed as fluorine)
Aluminium	Not more than 50 mg/kg
Arsenic	Not more than 1 mg/kg
Cadmium	Not more than 1 mg/kg.
Lead	Not more than 1 mg/kg
